

CARD BASED COPIER CONTROL TERMINALS

Model 1500, 2010, and 7210

ITC Systems' Copier Control Terminals provide streamlined trackable cash flow, while magnetic stripe or stored value cards provide easy, cashless convenience to the user.

BENEFITS AT A GLANCE

- Streamline cash flow
- Replaces coins
- Increase volume and revenue
- Reduces or eliminates vandalism
- Convenient for user, no more chasing coinage
- Choice of solutions: stored value or online account
- Cash collection, card dispensing and value adding can be done through unattended loaders

APPLICATIONS

- Photocopiers
- Fax Machines
- Printers
- Microfiche Readers/Printers

Magnetic Card Stored Value Copier Terminal

Model 1500

NetLink Online Account Based Copier Terminal

Model 7210

FUNCTIONALITY

ITC Systems' Copier Controllers provide access to a given machine through the use of an encoded reusable plastic card. Two types of Copier Controllers are offered: **Magnetic Card Stored Value** and **NetLink Online UPOS Terminals**.

These Terminals are extremely versatile and can be adapted to most self serve environments and equipment that accept cash or require authorized access. Once the system is implemented, controlling and accounting for costs and cash flow is simple and accurate.

All Terminals verify a unique ID, known as an Issuer Code, allowing access only to authorized users. The Terminals distinguish between different user groups (up to 9),

allowing for specific price settings and access limitations. They can also be used as accounting terminals, tracking individual accounts.

Once access has been granted, each transaction will reduce the value on the card or account. The new value is then shown on the display of the Terminal.

If the balance is too low, the Copier Control Terminal will deny access to the machine until more value is added.

The Terminals can measure in dollars and cents, and also in time or units. Electronic meters will provide a transaction summary, and they also contain internal

memory logs of the transactions for reconciliation and settlement. With Windows based SmarTrack software in place, the 1500 Terminal can be polled to facilitate complete system transaction management.

For NetLink Terminals, online account based software communicates via TCP/IP over a network to process the copy transactions. The MultiPlan database reconciles all tracked copies and charges by individual for settlement through the reporting module.

The comparable features of each model are documented on the back of this sheet for reference.

COMPARISON FEATURES

Features	Stored Value	NetLink Account
ITC Systems Copier Terminals	1500	7210
Card Types Accepted	ITC, ACT, Debitex, Danyl, XCP, ACD	Magnetic Stripe ABA, Barcode, Contactless
