

# LAUNDRY MASTER

Models: 1030, 2030 or 7030

A convenient, cashless system designed to indicate machine availability, charge for use and then track washer and dryer operation in your multi-machine laundry facilities.

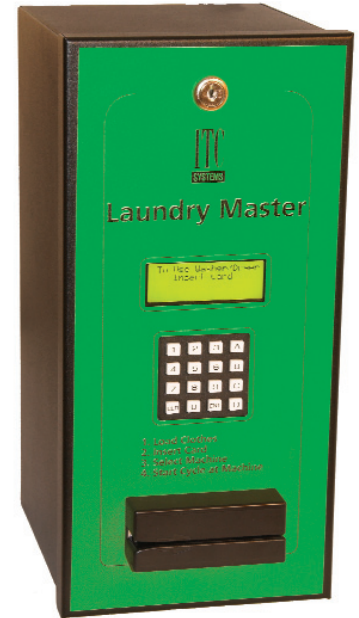

## FUNCTIONALITY

ITC Systems' Laundry Master delivers the convenience of an unattended and cashless laundry room, reducing operating costs and leveraging your existing investment. The strong steel cabinet can be mounted on any secure wall and is TCP/IP enabled. There are three payment configurations offered: online account based, stored value magnetic card and stored value smart card.

For online operation, the Laundry Master, model 7030, transmits transaction information to an account based system where the on-line account is updated via the TCP/IP network. With this configuration, the ability to accept credit cards is available using our credit card entitlement software.

For offline stored value operation we offer the Laundry Master, model 1030, magnetic card and model 2030, smart card operated units. The transaction amount is deducted from the card and the balance is updated. These transactions are logged for reporting via TCP/IP to SmarTrack software which reconciles and settles the transaction, providing reports on the results.

A single Laundry Master can control 32 individual machines, each equipped with the Laundry Machine Interface, model 4130. These interfaces communicate to the Laundry Master via a RS-485 daisy chain network. Additional features include configurable price per machine, stacked dryer times and the ability to monitor usage of each laundry machine or individual user.

Model 7030 shown here.

## FEATURES AND BENEFITS

- Offers both online or offline cashless laundry solutions
- Reduces theft and vandalism with a tamper-resistant, durable design
- Compatible for installation in most electronic coin drop laundry machines
- Offers configurable price and tracking per machine
- Offers stacked drying times
- Stores transactions both online and offline for secure records with flexible report capabilities
- Works with a variety of card types
- Makes wiring simple with RS-485 connection to machines
- Displays cardholder's balance and current transaction details
- Option available for customers to view machine status via the Web

## APPLICATIONS

- Apartments
- Self-serve Laundromats
- Universities and College campuses

## CARD READER OPTIONS

### Smart Card Stored Value Reader (for model 2030)

- Compatible with ITC, Mondex and SmartCity card formats
- Locks card during transaction
- Reads/writes value to card

## SOFTWARE OPTIONS

### Online model 7030

- Multiplan, a server based account package
- Credit card processing software

### Offline model 7010 or 7020

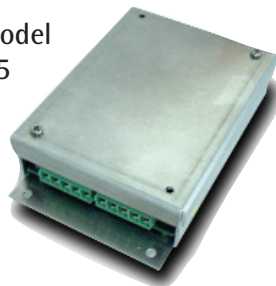

- SmarTrack, a transaction reporting package

### LaundryView™

- Mac-Gray's web-based machine status software

## COMMUNICATION FUNCTIONALITY

**Laundry Machine Interface** model 4130 communicates via RS-485 with the Laundry Master (one interface per laundry machine).

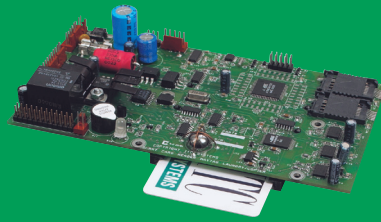

4130 Interface

**Laundry Master** includes network connectivity via TCP/IP protocol.

**Card Readers** use either RS-232 or TTL to communicate with Laundry Master.

## SMART CARD LAUNDRY READER

MODEL 2130\*  
ONE PER MACHINE

For facilities with Maytag PR Card Ready washers and dryers, the Smart Card Laundry Reader fits directly into each machine's control panel. It controls machine operation and charges the Smart Card for use.

All transactions are logged and stored in memory for later collection by SmarTrack software.

Customers can add value to cards using the Smart Card Loader, model 2080.

\*Laundry Master is not required
