

VENDING TERMINALS

Models: 1020, 2020, 7020

A secure, cashless vending solution that provides streamlined and trackable cash flow while offering patrons convenience and simplicity

FUNCTIONALITY

ITC Systems' Vending Terminals offer the ultimate in cashless vending. Each reader fits into the standard bill validator cut-out found in most MDB vending machines. The models **1020**, **2020** and **7020** can be installed in conjunction with the existing coin and bill acceptors or can operate independently.

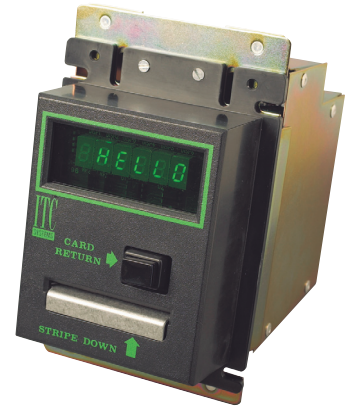

The Vending Terminals enable the use of a vending machine through an encoded magnetic stripe card or smart card. The value of the purchase is deducted from the card or account and the product is dispensed.

The Vending Terminal model **1020** is a stored value magnetic stripe card reader and the **2020** uses the stored value smart card system.

The **2020** model stores extensive transaction details and information that can be downloaded for reconciliation later.

The model **7020** utilizes ITC Systems' NetLink technology to debit a patrons' pre-allocated online account with real time service using TCP/IP protocol. The NetLink series uses an ABA magnetic stripe card that can also be a credit card.

When it comes to cashless vending, ITC Systems can customize a solution perfectly suited to fit your needs.

Mag Card Stored Value model 1020

Smart Card Stored Value model 2020

NetLink Online Terminal model 7020
